

Electronic design engineer

MGB-Tech is looking for highly motivated electronic design engineers who are familiar with hardware design. Analog design with high frequency understanding, PCB layout analysis and general physical insight are some of the skills we value in our engineers. We work in team using out of the box thinking patterns to create innovative solutions for our customers. Both Senior as Juniors are welcome. No experience is required.

About MGB-Tech

MGB-Tech is a young, continuously growing company that focuses on putting knowledge into practice. As an engineering organization we deliver solutions into two market segments: Environmental and Telecom. Our target is to deliver added value where necessary by offering consulting, designs,

Our dynamic team has in depth knowledge of concepts, technology, design principles and has enough abstract capacity to present solutions to less technical people. MGB-Tech differs significantly to quite some consulting organizations where only vague understanding is present and the consultants cannot enforce their solutions with in depth knowledge.

Your profile

The ideal candidate:

- holds a Master or Engineering degree
- eager to learn
- is very analytic
- you are interested in new technology's
- has enough abstraction capabilities to approach problems conceptually
- is familiar with using design patterns
- fluent in English, both written and spoken
- is self managing
- takes initiative
- is familiar with embedded design

Assets are:

- knowledge of software and its constraints

We offer

- An interesting working environment among young enthusiastic engineers and academics.
- In a dynamic team you have the ability to work on challenging projects.
- Your contributions do not go unnoticed and add significantly value. Lots of room for self development even in fields beyond your field of expertise.
- You are able to follow a project very closely from start to finish making you not just a piece of the chain.
- We motivate research to gain in depth knowledge.
