

Software Developer / Annalist

MGB-Tech is looking for a highly motivated Software Developer/Annalist with excellent Object-Oriented skills and who is familiar with using Design Patterns, UML, Agile software development, ... Both Senior as Juniors are welcome.

About MGB-Tech

MGB-Tech is a young, continuously growing company that focuses on putting knowledge into practice. As an engineering organization we deliver solutions into two market segments: Environmental and Telecom. Our target is to deliver added value where necessary by offering consulting, designs,

Our dynamic team has in depth knowledge of concepts, technology, design principles and has enough abstract capacity to present solutions to less technical people. MGB-Tech differs significantly to quite some other consulting organizations where only vague understanding is present and the consultants cannot enforce their solutions with in depth knowledge.

Your profile

The ideal candidate:

- holds a Master or Engineering degree
- is very analytic
- has enough abstraction capabilities to approach problems conceptually
- has hands-on experience and deep insight (beyond textbook knowledge) in object oriented design
- is familiar with using design patterns
- can use UML as leverage
- understands the added value from agile software development
- fluent in English, both written and spoken
- is self managing
- takes initiative
- complies with dead lines

Assets are:

- familiarity with embedded design
- knowledge of hardware and its constraints

We offer

- An interesting working environment among young enthusiastic engineers and academics.
- In a dynamic team you have the ability to work on challenging projects.
- Your contributions do not go unnoticed and add significantly value. Lots of room for self development even in fields beyond your field of expertise.
- You are able to follow a project very closely from start to finish making you not just a piece of the chain.
- We motivate research to gain in depth knowledge.
